Objective: Obtain a position related to thermal and fluids systems. Develop abilities through work experience.

Educational Background

Villanova University, Villanova, PA
Bachelor of Science, School of Engineering
Concentration: Thermal and Fluid Systems
Business Minor, School of Business
GPA: 3.29 on 4.00 scale

2015

Work

EP Caine & Associates CPA, LLC

2014-2015

- Researched various accounting topics to facilitate CPA operations such as a congressional testimony on accrual vs cash based accounting for small business.
- Helped facilitate the company's organization and transition from a paper to an electronic database.
- Learned about small business management and various accounting topics.

Lab for Advanced Thermal and Fluid Systems

2013 and 2015

- Full Time undergraduate researcher (2013) and Graduate research assistant (2015).
- Applied the fundamentals of heat transfer and fluid mechanics during the design and construction of a wind tunnel. (2013)
- Assisted the study of the effects of spray cooling through microdroplets through a droplet impingement experiment. (2013)
- Participated in thesis work involving cooling electronics with Two-Phase Flow. (2015)

Projects

Solar Thermal Collector Design Project

- Participated in the design and modeled a solar thermal Collector device. This is a prototype as a water heating solution for the home.

Deep Chill Server Design

- Our team had to solve a base case and come up with two alternative solutions that improved upon the base.

Brewery Design

- Worked with a team to create an efficient and economical brewery design and presentation of our work.

Skills

- Proficiency in Microsoft Office Suite, MatLab, and SolidWorks
- Familiarization with Spanish
